

SFXCreator.exe is a tool for creating self-extracting packages in executable format (.exe).

It is a completely free tool.

The **SFXCreator.exe** executable launches PowerShell with a graphical interface:

Each field supports drag and drop.

Usage:

1. Drag and drop the folder containing the sources
2. Drag and drop the chosen icon (.ico)
3. Enter the command to run
4. Choose whether the command execution will be visible or hidden (ComboBox with options: Visible or Hidden)
5. Enter the full path for the executable (including its name) — if you forget the .exe, it will be added automatically
6. Press **Enter**, and you're done!
